

WHY CONSIDER CLOUD-BASED IT SOLUTIONS ?

- No upfront capital expenditures required
- Monthly pay-as-you-go cost, you only pay for capacity and services you actually use
- Easy and fast to scale up IT resources as needed for peak periods
- Enterprise-class robustness and 7x24 availability
- Expert management and monitoring, local IT employees can focus on more important projects
- All data is encrypted with customer retaining the encryption keys

SERVICES OFFERINGS

Appliance/Cloud-based Backup and Disaster Recovery	Replace tape backup with faster, more reliable disk backup appliance on site. Easy-to-use interface makes backup management simple and shrinks backup windows. Appliance and/or servers can be backed up to multiple locations in the cloud. Data can be quickly restored when needed.
Email Hosting	Email is hosted in the cloud rather than in your facility. Available 7x24 from anywhere with an Internet connection. Full Microsoft Exchange capabilities or generic email interface. Low cost, reliable, pay by the number of mailboxes.
Email Archiving	Move old email automatically off of production email server based on your retention requirements. Archived email can be easily searched by using point-and-click interface based on your search criteria. Fully encrypted and protected, cannot be altered by anyone. Meets all Federal and state laws and requirements.
Email Security	Both inbound and outbound email is scanned for viruses and other banned content. Specific scans for content considered to be security breaches can be implemented. Typically reduces the amount of inbound email by 80% before it gets to your system. Eliminates need to try to keep up with latest virus patches, is always up to date. Outbound email can be scanned for improper use of company intellectual property and illegal disclosure of patient information in health care facilities.
Server Hosting	Application and production servers can be hosted and/or virtualized in remote data centers. This is an inexpensive yet effective way for disaster planning. It alleviates your IT personnel from having to waste time managing, patching, upgrading, and monitoring servers.
